EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Daniel Kavanaugh on 1/20/2009.

The application has been amended as follows: claim 1 recites, "A method of processing a video signal, said video signal comprising video data captured by a camera and consisting of a stream of pixel bytes representing the pixels of successive video frames, each of said video frames corresponding to a two-dimensional array of pixel bytes, said method comprising: converting, by a processor, said stream of pixel bytes into a stream of difference bytes by performing a subtraction between each pixel byte and a preceding pixel byte in said stream; discarding, by a processor, any carry bit produced by said subtraction; grouping together, by a processor, in a single group the difference bytes corresponding to a current one of said video frames; ranking, by a processor, the difference bytes occurring in said group in accordance with the population of the difference bytes of the same value in said group, and generating a code table for the current video frame correlating each of said difference bytes with one of a set of minimum length characters, wherein higher ranking difference bytes are assigned to shorter length characters: replacing, by a processor, each difference byte with the corresponding character in accordance with said code table, so as to produce a stream

of minimum length characters, said stream comprising a compressed version of said video signal." Claim 11 recites, "A method of recording in real time onto a storage device video data from a camera or recorder by compensating for a difference in data rate of said video data and a write speed of said storage device, said video data consisting of a stream of pixel bytes representing the pixels of successive video frames, each of said video frames corresponding to a two-dimensional array of pixel bytes, said method comprising: converting, by the processor, said stream of pixel bytes into a stream of difference bytes by performing a subtraction between each pixel byte and a preceding pixel byte in said stream; discarding, by the processor, any carry bit produced by said subtraction; grouping together, by the processor, in a single group the difference bytes corresponding to a current one of said video frames; ranking, by the processor, the difference bytes occurring in said group in accordance with the population of the difference bytes of the same value in said group, and generating a code table for the current video frame correlating each of said difference bytes with one of a set of minimum length characters, wherein higher ranking difference bytes are assigned to shorter length characters; replacing, by the processor, each difference byte with the corresponding character in accordance with said code table, so as to produce a stream of minimum length characters, said stream comprising a compressed version of said video data; and writing the stream of minimum length characters and the code table to a storage device." Claim 12 recites, "The method of claim 11 wherein the storage disk comprises a disk memory."

2. The following is an examiner's statement of reasons for allowance: The present invention is directed towards compressing lossless video data in real time. Independent claims uniquely identify the distinct features, ranking the difference bytes occurring in said group in accordance with the population of the difference bytes of the same value in said group, and generating a code table for the current video frame correlating each of said difference bytes with one of a set of minimum length characters, wherein higher ranking difference bytes are assigned to shorter length characters: replacing each difference byte with the corresponding character in accordance with said code table, so as to produce a stream of minimum length characters, said stream comprising a compressed version of said video signal. The prior art does not anticipate or render the above obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MISHAWN DUNN whose telephone number is (571)272-7635. The examiner can normally be reached on Monday - Friday 7:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thai Tran can be reached on (571)272-7382. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
